Module III – ELECTRICAL MACHINES

Assignment Questions

1. With neat diagram, explain the constructional and working principle of a D.C. generator.
2. Derive the EMF equation of a D.C. generator.
3. Explain the different types of generator and draw its equivalent circuit.
4. With a neat sketch, explain the working principle of a D.C. motor.
5. Compare lap and wave winding with necessary diagram.
6. Discuss the applications of D.C. series motors, D.C. shunt motors and compound motors.
7. Draw and explain the construction and principle of operation of a transformer.
8. Derive the EMF equation and transformation ratio for a transformer.
9. Explain the construction and working principle of operation of a three-phase induction motor.
